## Project Summary

### Topic/Purpose

My final project is a website for Red Dragon Realty, a small real estate firm located in Temple City, California. It is a platform where users can learn more about the brokerage and the services offered to buyers and sellers, as well as people seeking mortgage financing. The site also allows people to navigate through agents' information, listings, and more. They can also contact the broker and firm by utilizing the contact information provided or submitting a form.

### Extras

1. I created a form on the "Contact Us" page
2. I used several jQuery plugins. Documentation for the ones I used (not from class) is provided below:
  - a. "Fade-slide-flip": <https://www.jqueryscript.net/slideshow/fade-slide-flip.html>
    - i. Used on home.html
  - b. "Roll-number": <https://demo.tinywall.net/numscroller/>
    - i. Used on home.html
3. On two of my pages (RE Agents and Listings), I implemented media tags to embed video files into the heading.
4. iframes used to embed Google Maps (appears in the footer of each page, and also on the Contact Us page)
5. Transition & transformations used on the company logo in the footer; scales when users hover over it
